karmyogi · Camera Calibration Sheet

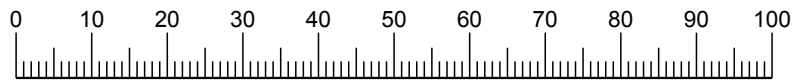

Place flat on the machine bed. The 4 corner codes set the bed-plane scale & perspective; cut-out codes mark the stock.

PRINT AT 100% — “Actual size”, NOT “Fit to page”.

40.0 mm

↑ This square must measure exactly **40.0 mm** per side. If not, reprint at 100% scale.

100 mm reference ruler — verify with a real ruler

CUT OUT & STICK ON STOCK CORNERS (each 18 mm)

OPTIONAL MATERIAL TAGS

plywood 12mm

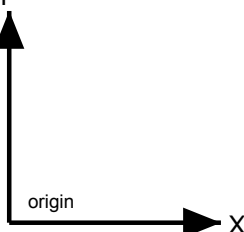

mdf 18mm

1. **Print at 100%** and confirm the 40 mm square measures 40 mm with a ruler.
2. **Bed:** lay this sheet flat on the bed, BL code toward the machine front-left (the X→ / Y↑ origin arrow).
3. **Stock:** cut out one or more **S#** stickers and stick them on the workpiece corners (top face).
4. In karmyogi open **Camera** → **Auto-setup**: it detects the codes, solves mm-per-pixel + perspective, then measures bed & stock size by edge detection.
5. Each code is self-describing (role + real size in mm baked into its payload), so a single detected code already fixes the scale.
